

# eVisit Mobile

## Closer to your Patients

- With eVisit Mobile, doctors and caregivers are informed of the latest patient data anywhere and at any time.
- Centrally managed, electronic patient files are ideally prepared for mobile use via eVisit Mobile. As such, ward rounds can be prepared in a targeted manner and conducted efficiently.
- Administrative data, laboratory reports and additional information are electronically recorded in the relevant core systems and are available to the doctor online.
- Observations and notes can be electronically recorded with eVisit Mobile during the ward round.
- With eVisit Mobile the persons in charge can also monitor and control the treatment process externally, e.g. from home. This allows providing the patient with the necessary help immediately.

In cooperation with **the i-engineers**

Since 1989, the i-engineers have been devoted to software development in the fields of document management, workflow, business administration and records management. the i-engineers make format-neutral and cross-system data and workflow management available in various fields of the economy. Service Oriented Architecture Basis Services are linked with applications for company- or worldwide networks for cross-system data transfer and the central management of data in different formats. the i-engine's flexibility and scalability guarantee the highest adaptability to new framework conditions and requirements.

Life is a digital process.

### The Challenge

With the rolling out of electronic patient files, a major step has been taken towards patient-centred processing in health care. But although electronically available, information can often only be retrieved from at the doctor's or carers' workstation. During the ward round or outside the hospital, the information is not accessible.

Both during preparation and during the ward round, information on hard copy is often used, as these work processes are not sufficiently supported by the ICT. As such, the benefits of electronic patient data updated consistently cannot be fully used, and unnecessary work is required for the electronic recording of the data after the ward round.

### The Solution eVisit Mobile

In eVisit Mobile, doctors and caregivers have a tool that is tailored to the processes in a targeted manner. The attending doctor has access to the relevant data of his patients anywhere and at any time. All information of the patient files is ideally prepared for mobile use. The user interface is specially optimised for application using touch screens. As such, eVisit Mobile offers more convenience than the classic clipboard, because it also allows faster and more targeted retrieval of the latest information.

As eVisit Mobile is directly linked to the electronic patient files and therefore to the consolidated data of the specialist applications (KIS, LIS, RIS, etc.), the attending doctor has access to up-to-date data at any time. He has insight into the complete patient file, as he is accustomed to from his usual workstation environment. Observations and comments noted during the ward round are directly sent to the electronic patient file and are therefore available to other persons without delay.

### Your Benefits with eVisit Mobile

- Increase the efficiency of your ward rounds thanks to the perfectly prepared information for on the go and thereby win more time for the personal care of your patients.
- Thanks to the direct connection to the electronic patient file, you have access the latest data at any time – even from home
- Record observations and notes directly during the ward round – no subsequent migration following the ward round is necessary
- If you involve external specialists, all necessary details are available thanks to eVisit Mobile
